

AutoMind AI - User Manual

Complete guide for using AutoMind AI desktop application.

1. Overview of AutoMind AI

AutoMind AI is an intelligent desktop platform designed for AI assistance, data analysis, coding practice, and developer learning.

AutoMind provides:

- AI Chat Assistant
- DataLab for data analysis
- CodeLab for coding and execution
- Coding Challenge Platform
- Leaderboard and XP system
- Global Contest platform

2. Application Dashboard

After launching AutoMind, users can access different modules: AI Chat, Data Lab, Code Lab, Coding Challenges, Leaderboard, Global Contest.

Each module provides a different workflow for learning, development, and productivity.

3. AI Chat

AI Chat is the main AI assistant of AutoMind.

Users can ask questions, generate ideas, solve problems, and get AI assistance. AI Chat provides three modes:

3.1 Fast Mode

Fast Mode provides quick AI responses. Best for:

- Simple questions
- Quick explanations

3.2 Smart Mode

Smart Mode provides more detailed and intelligent responses. Best for:

- Complex questions
- Research
- Detailed explanations
- Problem solving

3.3 Agent Mode

Agent Mode uses AI agents to complete advanced tasks. Best for:

- Multi-step tasks
- Automation workflows
- Advanced assistance
- Professional use cases

4. DataLab

DataLab is a data analysis environment inside AutoMind. Users can perform Exploratory Data Analysis (EDA).

Features include:

Data Cleaning:

- Handle missing values
- Prepare datasets
- Improve data quality

Data Visualization:

- Create charts
- Analyze patterns
- Understand data distribution

Data Exploration:

- View statistics
- Discover insights
- Analyze datasets

5. CodeLab

CodeLab is a coding workspace where users can write and execute code.

Features:

- Write programs
- Run code
- Test solutions
- Practice programming

CodeLab helps users learn and experiment with programming in an interactive environment.

6. Coding Challenge Platform

AutoMind includes a coding challenge platform where users can improve their programming skills. Users can:

- View coding challenges
- Submit solutions
- Solve programming problems
- Earn XP points

Challenges help users practice real programming skills.

7. XP and Ranking System

Every solved challenge increases user XP. Users can:

- Track progress
- View earned XP
- Compare performance

Leaderboard shows user rankings based on achievements and activity.

8. Leaderboard

Leaderboard allows users to view rankings among AutoMind users. Users can check:

- Position
- XP score
- Progress
- Achievements

9. Global Contest

Global Contest provides competitive events where users can participate, solve challenges, and compete with other participants.

Users can improve skills and showcase performance through competitions.

10. User Workflow

Recommended workflow:

- Use AI Chat for learning and assistance.
- Analyze datasets in DataLab.
- Practice programming in CodeLab.
- Solve challenges to earn XP.
- Participate in contests and improve ranking.

11. Tips for Best Experience

- Use Smart/Agent mode for complex tasks.
- Explore DataLab before analyzing real datasets.
- Practice regularly in CodeLab.
- Complete challenges to improve ranking.
- Keep the application updated.

12. Support
